

ANSWER KEY

Mid-Term quiz5

Course: CSC325 - Speech Processing

Q1. Which of the following components make up a basic computer system?...

Answer: B. CPU, Motherboard, Memory

Explanation: The CPU (Central Processing Unit) is the main component that performs most of the processing inside a computer. The motherboard is a large circuit board that connects all the components together, and memory refers to RAM (Random Access Memory).

Q2. What does architecture refer to in the context of computers?...

Answer: A. The physical layout of the components

Explanation: Architecture in computing refers to the design and structure of a computer system or network. In this context, it primarily focuses on the physical layout of the components.
