Speech Processing Quiz 2 · CSC325

CONFIDENTIAL — FOR INSTRUCTOR USE ONLY

Q1. True or False? In speech processing systems, the primary role of memory is to store and re...

' **False**

Explanation: While memory does store digital audio signals in speech processing systems, its role is not limited to this function. Memory also plays a crucial part in storing algorithms and models for tasks such as noise reduction, echo cancellation, and language modeling.

Q2. True or False? In speech processing systems, the memory hierarchy plays a negligible role ...

' **See explanation**

Explanation: The statement is False. In speech processing systems, the memory hierarchy significantly impacts overall system performance due to its effect on data access speed and latency.
