

ANSWER KEY

Quiz2

Course: CSC354 - Machine Learning

CLO-1 Illustrate various concept learning algorithms with suitable examples.

Q1. Which of the following algorithms is best suited for learning non-linear decision boundaries in high dimensional spaces, often used as a preprocessing step before applying Support Vector Machines (SVM)?

Answer:

C - Kernel Principal Component Analysis (KPCA)

Marks: 1

Q2. Which of the following algorithms is most suitable for learning a decision tree classifier with minimal overfitting?

Answer:

B - Option B - Random Forest Classifier using bagging and feature randomness to improve generalization.

Marks: 1

Q3. Which of the following algorithms is most suitable for a scenario where you have to learn from incomplete labeled data?

Answer:

A - Option A

Marks: 1

Q4. Which of the following algorithms is most suitable for a classification problem with imbalanced classes?

Answer:

B - Option B - Synthetic Minority Over-sampling Technique (SMOTE).

Marks: 1
