

ANSWER KEY

Quiz3

Course: CSC325 - Speech Processing

CLO-1 Articulate the components of a computer along with its architecture.

Q1. Describe the key components of a computer and explain how they interact to form its architecture.

Answer:

A computer consists of hardware (such as central processing unit, memory, storage devices) and software. The hardware interacts through the CPU which processes data from input devices, stores it in memory or secondary storage, and outputs results via output devices.

Q2. Describe the key components of a computer and explain how they interact to form its architecture.

Answer:

A computer consists of hardware (such as central processing unit, memory, storage devices) and software. The hardware interacts through the CPU which processes instructions from programs stored in memory, retrieves data from storage for use by applications running in RAM, and sends output back to external devices via I/O interfaces.
