Assignment 7

Course: CSC354 - Machine Learning

Assessment-based marking guide with evaluation criteria

CLO-4 Apply deep learning and reinforcement learning algorithms to environments with complex dynamics.

Q1. In a reinforcement learning environment with complex dynamics, you are tasked to choose an algorithm that can handle non-stationary and stochastic environments effectively. Which of the following algorithms would be most appropriate?

Evaluation Criteria:

- **Algorithm/Approach (30 marks):**
Correct algorithm or problem-solving approach
- **Code Correctness (30 marks):**
Code produces correct output and handles edge cases
- **Logic & Efficiency (25 marks):**
Logical flow and reasonable time/space complexity
- **Code Quality (15 marks):**
Readable code with proper naming and structure

Expected Output: Verify code produces correct results for all test cases

Total: 100 marks
