INSTRUCTIONS

- All questions are compulsory.
- Total time: 30 minutes.
- Total marks: 100.

Questions

Assessment Questions

- 1 In supervised learning for classification problems, which algorithm is commonly used to find a decision boundary that separates classes?
 - A Linear Regression
 - B Logistic Regression
- 2 In reinforcement learning, an agent learns to perform actions in a complex environment by:
 - A Learning from labeled data
 - B Interacting with the environment and receiving rewards or penalties based on its actions
